Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7 and 11-17, drawn to a method for corn breeding comprising crossing a male fertile and male sterile maize plant, each containing a different recessive starch mutant allele, classified in class 800, subclass 275, for example.
- II. Claims 8-10 and 18-20, drawn to isolated starch and compositions, classified in class 536, subclass 102, for example.

The inventions are distinct, each from the other because:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process such as chemical treatment of starch from wild-type corn plants or non-corn plants.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions and different modes of operation. The starch isolation techniques and further modification with adjuvants of Group II are not required by Group I. The non-living isolated starch and starch composition components of Group II are physiologically and biochemically distinct from

Art Unit: 1638

the living whole plants of Group I. The methods of plant breeding, and the male-fertile and male-sterile and waxy/sugary lines of Group I are not required by Group II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, fields of search, and classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
